Sustainability education at Lund University

Sustainability is woven into all our activities at Lund University: education, research and community engagement. Photo: Johan Persson.

We aim to provide all of our students with perspectives on sustainability that are relevant to their subject. Solving sustainability crises requires a variety of perspectives, and we believe that each academic field has a crucial role to play.

As Sweden's most comprehensive university, we offer a diverse education in sustainability, covering different aspects. Many of our courses are part of structured degree programmes, but our students can also take stand-alone courses or design their own programme.

All our regular courses and programmes use ECTS credits, with 1.5 credits corresponding to one week of full-time study.

Note that the course and programme links on this page may take you to content on webpages outside this website (lunduniversity.lu.se), e.g. the Swedish counterpart of this website – lu.se – faculty and department websites, and joint programme websites. The linked content may be in English or Swedish.
